

# Veeva RTSM

## 'Randomization Only'

Veeva RTSM is a fast, intuitive, and complete randomization and trial supply management solution designed to simplify complex processes and expedite clinical trials. The extensive feature set allows Veeva RTSM to scale and support a spectrum of different trial design needs and complexities across all therapeutic areas.

We understand that sometimes sponsors may only require randomization capabilities and not full trial supply management; this is fully supported by Veeva RTSM. The system is modular and highly configurable; therefore, any trial supply management features can easily be switched off. This provides sponsors with a robust, reliable, cost-effective 'randomization only' option.

The screenshot shows the Veeva RTSM interface for a 'Demonstration System Protocol P124 v23R3'. The 'Subjects' tab is active, displaying a 'Subject List' with 3 rows. The table includes columns for Menu, Country, Site, Subject ID, Birth Date, Age at Screening, Sex, Previous Treatment, Severity, Status, Status Date, Next Event, and Target Date. The 'Status' column is filtered to 'Randomized'. The 'Next Event' column shows 'Week 2' for all subjects, and the 'Target Date' column shows dates ranging from 20 Jun 2024 to 08 Jul 2024.

Menu	Country	Site	Subject ID	Birth Date	Age at Screening	Sex	Previous Treatment	Severity	Status	Status Date	Next Event	Target Date
...	United States	101	101-005	17 Oct 1988	35	Female	Yes	Mild	Randomized	06 Jun 2024	Week 2	20 Jun 2024
...	United States	101	101-006	04 Dec 1965	58	Female	No	Moderate	Randomized	13 Jun 2024	Week 2	27 Jun 2024
...	United States	101	101-007	22 Aug 2004	19	Female	Yes	Moderate	Randomized	24 Jun 2024	Week 2	08 Jul 2024

## 'Randomization Only' Key Features

**Veeva RTSM ensures this critical transaction is completed with timeliness and precision.**

- Available randomization schemas: simple, blocked, stratified (single or multi-variable), dynamic/minimization, forced, and adaptive.
- Supports re-randomization
- Easily configure eligibility, stratification, and other related questions to randomize subjects appropriately
- Supports screening and randomization capping
- Prevents duplicate data entry during screening and randomization through connectivity with Veeva EDC or 3rd party EDC solutions

## Benefits

- **Everything you need and only what you need:** modular solution allows you to only use and pay for the functionality you need when you need it
- **No compromises:** flexible configuration options combined with appropriate customizations achieves the randomization design you want.
- **Exceptional service delivery:** proactive project management, communication, and guidance from Veeva RTSM experts at every stage of your trial

## Additional Key Features

### Rapid Setup Processes

Modular and highly configurable software enables customers to achieve faster study set-up timelines, especially for 'randomization only' designs.

### Emergency Unblinding

Permitted users can break the blind in an emergency with both blinded and unblinded notifications available. Emergency unblinding can also be provided as a backup service by the 24/7/365 help desk.

### Biostatistics Services

Dedicated RTSM biostatisticians support randomization list upload and verification. Option for Veeva to generate a list on behalf of a customer and provide additional consulting services.

### User-friendly Interface

The interface is simple and easy-to-use with role and permission-based access. It is purposely designed to minimize the number of clicks to complete common tasks and improve the accuracy of site data entry.

### Accessible Reporting

Intuitive filterable interfaces allow users to target what information they need to report on when they need it: review details on screen or export on demand.

### Service Expertise

Veeva RTSM is delivered by a services team focused on customer success. The team has a deep understanding of RTSM best practices, system configuration, and validation. During set up they work closely with customers to implement with speed and accuracy. Throughout trial execution, the project manager and 24/7/365 help desk provide ongoing expertise and support.
